

LYNTON ResurFACE LASER IS THE MOST ‘INNOVATIVE AESTHETIC TREATMENT’

BEFORE

AFTER

Lynton Lasers, the UK's leading aesthetics technology brand with over 20 years' experience, are proud to present their award winning laser treatment, ResurFACE. In its first year of launch, this new ResurFACE fractional laser won the MyFaceMyBody Award for 'Most Innovative Aesthetic Treatment 2014', this being the latest acknowledgment of Lynton's continued technological innovation, and encapsulates 20 years expertise in aesthetic technologies.

Effectively treating the top skincare concerns in the UK, this new, 2940nm fractional laser skin resurfacing (ablative) system is predominantly used on stretch marks, scarring and facial rejuvenation for fine lines and wrinkles. ResurFACE gives the skin a smooth, youthful and glowing appearance, and is shown to produce dramatic results with low

downtime and very low risk of any side effects.

Lynton have developed ResurFACE fractional laser to help practitioners tackle the ever-growing demand for treatment results that are usually only gained with fully ablative skin resurfacing (e.g. acne scarring), by providing a technology that has none of the associated down-time or inconvenience. The ResurFACE treatment utilises thermal trauma to dramatically increase collagen production and remodel scar tissue, and in addition micro-columns of ablation cause rapid renewal of the epidermis enhancing the texture of skin, smoothing lumps, bumps, millia and congestion. So for the full range of skin types and colours the ResurFACE treatment can be highly beneficial in the fight against ageing, problem skin, stretch marks and scarring - creating tighter, brighter and smoother skin.

“The most sophisticated laser addition to my clinic yet! This laser is easy to use and it is brilliant for resurfacing, stretch marks, acne scars, wrinkles, pigmentation. Down time is minimal, it is very well tolerated and clients re-book because they love the results.” Sally O'Donnell - Aesthetic Laser Clinic, 2015
